

Editorial – Volume 1 of the Algerian Journal of Electrical Systems and Sustainability (AJESS)

We are pleased to introduce Volume 1 N°1 of the Algerian Journal of Electrical Systems and Sustainability (AJESS). This first issue marks the launch of our journal, which aims to provide a platform for publishing high-quality research in electrical systems, renewable energy, and sustainability. Volume 1, Issue 1 (2025) includes five original articles from different regions of Algeria, showcasing the diversity and depth of research being conducted nationwide. These papers reflect the strong commitment of Algerian researchers to advancing knowledge in key areas that support national and global energy transitions.

All submitted manuscripts have undergone a thorough peer-review process, followed by careful proofreading and formatting to ensure consistency and quality. Additionally, each article was screened using plagiarism detection tools to uphold the highest standards of academic integrity. We sincerely thank our reviewers for their time and valuable feedback, which greatly contributed to the quality of this issue. Their dedication is highly appreciated.

We look forward to AJESS attracting contributions not only from Algeria but also from the international research community. With your support, we aim to develop a journal that fosters innovation, collaboration, and sustainable development.

Warm regards.

Pr. Djamilia REKIOUA, Editor-in-Chief
